INDEX TO VOLUME 40

SUBJECT INDEX

*Starred items are "Shorter Notes"

A. Algebra and Number Theory

06. Order, Lattices, Ordered Algebraic Structures

Katriňák, Tibor. *A new proof of the construction theorem for Stone algebras*, 75.

Martinez, Jorge. *Some pathology involving pseudo l-groups as groups of divisibility*, 333.

Pierce, Keith R. *The structure of a lattice-ordered group as determined by its prime subgroups*, 407.

Sherman, Gary J. *Groups in which every maximal partial order is exhaustive*, 83.

10. Number Theory

Apostol, Tom M. *Identities for series of the type* $\sum f(n)\mu(n)n^{-s}$, 341.

Bender, Edward A. *A lifting formula for the Hilbert symbol*, 63.

Hall, R. S. *Beurling generalized prime number systems in which the Chebyshev inequalities fail*, 79.

Knopfmacher, J. *A prime-divisor function*, 373.

Moreno, Carlos Julio. *The Hoheisel phenomenon for generalized Dirichlet series*, 47.

12. Algebraic Number Theory, Field Theory and Polynomials

Kiltinen, John O. *On the number of field topologies on an infinite field*, 30.

13. Commutative Rings and Algebras

Barshay, Jacob. *Determinantal varieties, monomial semigroups, and algebras associated with ideals*, 16.

Boisen, Monte B., Jr. and Larsen, Max D. *On Prüfer rings as images of Prüfer domains*, 87.

Choo, Koo-Guan. *The projective class group of the fundamental group of a surface is trivial*, 42.

Eakin, Paul and Heinzer, W. *More noneuclidian PID's and Dedekind domains with prescribed class group*, 66.

Fossum, Robert. *Commutative extensions by canonical modules are Gorenstein rings*, 395.

Heinzer, William. *Minimal primes of ideals and integral ring extensions*, 370.

Huckaba, James A. *On valuation rings that contain zero divisors*, 9.

Kiltinen, John O. *On the number of field topologies on an infinite field*, 30.

Kramer, Kenneth. *Colength of derivation ideals*, 346.

Martinez, Jorge. *Some pathology involving pseudo l-groups as groups of divisibility*, 333.

14. Algebraic Geometry

Barshay, Jacob. *Determinantal varieties, monomial semigroups, and algebras associated with ideals*, 16.

15. Linear and Multilinear Algebra; Matrix Theory (finite and infinite)

Barshay, Jacob. *Determinantal varieties, monomial semigroups, and algebras associated with ideals*, 16.

Beasley, LeRoy B. and Cummings, Larry. *Permanent groups*. II, 358.
Powers, N. C. *Real-linear operators on quaternionic Hilbert space*, 1.

16. Associative Rings and Algebras

Cohn, P. M. *Prime rings with involution whose symmetric zero-divisors are nilpotent*, 91.
Elliger, Sigurd. *On simple injective rings*, 93.
Fisher, Joe W. *Finiteness conditions for projective and injective modules*, 389.
Martindale, Wallace S. III. *On semiprime P.I. rings*, 365.
Mason, Gordon. *Solvable and nilpotent near-ring modules*, 351.
Rowen, Louis Halle. *On classical quotients of polynomial identity rings with involution*, 23.

17. Nonassociative Rings and Algebras

Lewand, Robert. *Extending a Jordan ring homomorphism*, 57.

18. Category Theory, Homological Algebra

Beyl, F. Rudolf. *The Schur multiplicator of metacyclic groups*, 413.
Choo, Koo-Guan. *The projective class group of the fundamental group of a surface is trivial*, 42.
Fleury, Patrick J. *Symmetric homology over rings containing the rationals*, 69.
Mack, John, Morris, Sidney A. and Ordman, Edward T. *Free topological groups and the projective dimension of a locally compact abelian group*, 303.

20. Group Theory and Generalizations

Beyl, F. Rudolf. *The Schur multiplicator of metacyclic groups*, 413.
Kannappan, Pl. *Characterization of certain groupoids and loops*, 401.
Keen, Linda. *A correction to "On Fricke moduli"*, 60.
Knop, Larry E. *Normal subgroups of groups which are products of two Abelian subgroups*, 37.
Lyndon, Roger, McDonough, Thomas and Newman, Morris. *On products of powers in groups*, 419.
Wehrfritz, B.A.F. *Conjugacy separating representations of free groups*, 52.
Whittemore, Alice. *On representations of the group of Listing's knot by subgroups of SL(2, C)*, 378.
———. *On special linear characters of free groups of rank $n \geqq 4$*, 383.

B. Analysis

26. Real Functions

Darst, R. B. *Zero sets of functions from non-quasi-analytic classes*, 543.
Wright, F. M. and Ling, J. N. *Admissible exponential representations and topological indices for functions of bounded variation*, 431.

28. Measure and Integration

Braude, Eric John. *Compact $\mathcal{G}$-Souslin sets are G_δ's*, 250.
Glicksberg, I. *Some remarks on absolute continuity on groups*, 135.

30. Functions of a Complex Variable

Caldwell, William V. *The dilatation of harmonic quasiconformal functions*, 205.
Chui, Charles K. *On approximation in the Bers spaces*, 438.
Fricke, Gerd H. *A note on multivalence of functions of bounded index*, 140.
Krajkiewicz, P. *Exceptional values of analytic functions*, 159.
Leeman, George B., Jr. *Some regularity theorems for typically real functions*, 191.
Rahman, Q. I. *On a property of rational functions*. II, 143.

32. Several Complex Variables and Analytic Spaces

Chen, Su-shing. *Bounded holomorphic functions in Siegel domains*, 539.

33. Special Functions
Wright, F. M. and Ling, J. N. *Admissible exponential representations and topological indices for functions of bounded variation*, 431.
Wynn, P. *On the zeros of certain confluent hypergeometric functions*, 173.
34. Ordinary Differential Equations
Buckholtz, J. D. *Isomorphism theorems for infinite order differential operators*, 533.
Gregory, John. *An approximation theory for oscillations of differential equations*, 166.
Hallam, Thomas G. *Classification of bounded solutions of a linear nonhomogeneous differential equation*, 507.
Kusano, Takaši and Onose, Hiroshi. *Nonlinear oscillation of a sublinear delay equation of arbitrary order*, 219.
Shamim Imdadi, S. M. and Rama Mohana Rao, M. *A note on topological dynamics and limiting equations*, 154.
Wong, James S. W. *A second order nonlinear oscillation theorem*, 487.
35. Partial Differential Equations
Greenlee, W. M. *A quadratic eigenvalue problem*, 123.
Guggenheimer, H. *Concave solutions of a Dirichlet problem*, 501.
41. Approximations and Expansions
Dunn, J. C. *Inversion of normal operators by polynomial interpolation*, 225.
Gregory, John. *An approximation theory for oscillations of differential equations*, 166.
Micchelli, C. A. *Chebyshev subspaces and convergence of positive linear operators*, 448.
42. Fourier Analysis
Kaufman, R. *Planar Fourier transforms and Diophantine approximation*, 199.
Saworotnow, Parfeny P. *Semigroups with positive definite structure*, 421.
Witsenhausen, H. S. *Metric inequalities and the zonoid problem*, 517.
43. Abstract Harmonic Analysis
Gerl, Peter. *Probability measures on semigroups*, 527.
Glicksberg, I. *Some remarks on absolute continuity on groups*, 135.
Granirer, Edmond. *Criteria for compactness and for discreteness of locally compact amenable groups*, 43.
Saworotnow, Parfeny P. *Semigroups with positive definite structure*, 421.
45. Integral Equations
deFigueiredo, Djairo G. and Gupta, Chaitan P. *On the variational method for the existence of solutions of Hammerstein type*, 470.
Kelley, Walter G. *A Kneser theorem for Volterra integral equations*, 183.
Nasim, C. *The solution of an integral equation*, 95.
46. Functional Analysis
Akemann, Charles A. and Newberger, Stuart M. *Physical states on a C*-algebra*, 500.
Aliprantis, C. D. *Some order and topological properties of locally solid linear topological Riesz spaces*, 443.
Andersen, Kenneth F. *On L^p norms and the equimeasurability of functions*, 149.
Behncke, Horst and Bös, Wolfgang. *A class of C*-algebras*, 128.
Brown, H. I. and Cho, Tae-Geun. *Subalgebras of $B[c]$*, 458.
Cengiz, Bahattin. *A generalization of the Banach-Stone theorem*, 426.
Clancey, Kevin and Cutrer, Wayne. *Subalgebras of Douglas algebras*, 102.

Dean, David W. *The equation $L(E, X^{**})=L(E, X)^{**}$ and the principle of local reflexivity*, 146.
Johnson, B. E. *Automorphisms of commutative Banach algebras*, 497.
Kallman, Robert R. *A theorem on the restriction of Type* I *representations of a group to certain of its subgroups*, 291.
Reich, Simeon. *A remark on C_σ spaces*, 215.
Samn, Sherwood. *A bounded Hilbertian basis in C*[0, 1], 465.
Senechalle, David A. *Equations which characterize inner product spaces*, 209.
Willig, Paul. *Type* II *W-* algebras are not normal*, 115.
———. *On hyperfinite W-* algebras*, 120.

47. Operator Theory

Bouldin, Richard. *Reducing decompositions for strictly cyclic operators*, 477.
Buckholtz, J. D. *Isomorphism theorems for infinite order differential operators*, 533.
Dash, A. T. *Tensor products and joint numerical range*, 521.
Dean, David W. *The equation $L(E, X^{**})=L(E, X)^{**}$ and the principle of local reflexivity*, 146.
Dunn, J. C. *Inversion of normal operators by polynomial interpolation*, 225.
deFigueiredo, Djairo G. and Gupta, Chaitan P. *On the variational method for the existence of solutions of nonlinear equations of Hammerstein type*, 470.
Greenlee, W. M. *A quadratic eigenvalue problem*, 123.
Helton, J. William. *Continuity of linear fractional transformations on an operator algebra*, 217.
Kim, Hong W. *On compact operators in the weak closure of the range of a derivation*, 482.
McGrath, S. A. *Two ergodic theorems for convex combinations of commuting isometries*, 229.
Powers, N. C. *Real-linear operators on quaternionic Hilbert space*, 1.
Sato, Ryotaro. *On Akcoglu and Sucheston's operator convergence theorem in Lebesgue space*, 513.
Solomon, J. L. *A note on the extension of contractive mappings*, 319.
Terkelsen, Frode. *Boundedness properties for semigroups of operators*, 107.
Wadhwa, Bhushan L. *Decomposable and spectral operators on a Hilbert space*, 112.
Weber, R. E. *Analytic functions, ideals, and derivation ranges*, 492.
Wells, John C. and DePrima, Charles R. *Local automorphisms are differential operators on some Banach spaces*, 453.

49. Calculus of Variations and Optimal Control

deFigueiredo, Djairo G. and Gupta, Chaitan P. *On the variational method for the existence of solutions of nonlinear equations of Hammerstein type*, 470.

C. Applied Mathematics

76. Fluid Mechanics

Greenlee, W. M. *A quadratic eigenvalue problem*, 123.

D. Geometry

52. Convex Sets and Geometric Inequalities

Buchman, E. O. and Valentine, F. A. *A characterization of convex surfaces which are L-sets*, 235.
Guggenheimer, H. *Concave solutions of a Dirichlet problem*, 501.
Schneider, Rolf. *A characteristic extremal property of simplices*, 247.

Stavrakas, Nick M. *A generalization of Tietze's theorem on convex sets in R^3*, 565.
Wolfe, Dorothy. *Metric inequalities and convexity*, 559.

53. Differential Geometry

Chen, Bang-yen. *An invariant of conformal mappings*, 563.
Chen, Chang-shing. *More on tight isometric immersions of codimension two*, 545.
Houh, Chorng-Shi. *Some totally real minimal surfaces in CP^2*, 240.
Jacobowitz, Howard. *Isometric embedding of a compact Riemannian manifold into Euclidean space*, 245.
Yen, Yi-Ching. *A characterization of four-dimensional Einstein manifolds*, 554.

E. Logic and Foundations

02. Logic and Foundations

Braude, Eric John. *Compact $\mathcal{F}$-Souslin sets are G_δ's*, 250.
McLaughlin, T. G. *On retracable sets with rapid growth*, 573.
Pinter, Charles. *Terms in cylindric algebras*, 568.
Wood, Carol. *The model theory of differential fields of characteristic $p \neq 0$*, 577.

04. Set Theory

Braude, Eric John. *Compact $\mathcal{F}$-Souslin sets are G_δ's*, 250.

F. Statistics and Probability

60. Probability Theory and Stochastic Processes

Saworotnow, Parfeny P. *Abstract stationary processes*, 585.

G. Topology

22. Topological Groups, Lie Groups

Armacost, D. L. and Bruner, R. R. *Locally compact groups without distinct isomorphic closed subgroups*, 260.
Granirer, Edmond. *Criteria for compactness and for discreteness of locally compact amenable groups*, 615.
Hunter, R. P. *Compact semigroups with low dimensional orbit spaces*, 277.
Kallman, Robert R. *A theorem on the restriction of Type I representations of a group to certain of its subgroups*, 291.
Mack, John, Morris, Sidney A. and Ordman, Edward T. *Free topological groups and the projective dimension of a locally compact abelian group*, 303.

54. General Topology

Braude, Eric John. *Compact $\mathcal{F}$-Souslin sets are G_δ's*, 250.
Darst, R. B. *Zero sets of functions from non-quasi-analytic classes*, 543.
Dickman, R. F., Jr., McCoy, R. A. and Rubin, L. R. *C-separated sets in certain metric spaces*, 285.
Dooley, Robert A. *Further extending a complete convex metric*, 590.
Geraghty, Michael A. *On contractive mappings*, 604.
Hager, Anthony W. *Compactification and completion as absolute closure*, 635.
Hagopian, Charles L. *Schlais' theorem extends to λ connected plane continua*, 265.
Haver, William E. *Locally contractible spaces that are absolute neighborhood retracts*, 280.
Lozier, F. W. and Marty, R. H. *The number of continua*, 271.
McCoy, R. A. *A filter characterization of regular Baire spaces*, 268.
Mack, John, Morris, Sidney A. and Ordman, Edward T. *Free topological groups and the projective dimension of a locally compact abelian group*, 303.
Norton, Victor and O'Brien, Thomas. *Anosov flows and expansiveness*, 625.

*Rayburn, Marlon. *A characterization of realcompact extensions*, 331.
Solomon, J. L. *A note on the extension of contractive mappings*, 319.
Thron, W. J. *On a problem of F. Riesz concerning proximity structures*, 323.
Zenor, Phillip. *Certain subsets of products of θ-refinable spaces are realcompact*, 610.

55. Algebraic Topology
Choo, Koo-Guan. *The projective class group of the fundamental group of a surface is trivial*, 42.
Hill, R. O., Jr. *On characteristic classes of groups and bundles of $K(\Pi, 1)$'s*, 597.
Kahn, Donald W. *Relations in stable homotopy modules*, 253.
Kearton, C. *Noninvertible knots of codimension 2*, 274.
Keesling, James. *On the shape of torus-like continua and compact connected topological groups*, 297.
O'Neill, Duane. *Pontryagin classes of vector bundles over* BSp(n), 315.
Randall, Duane. *Projectivity of the Whitehead square*, 609.

57. Manifolds and Cell Complexes
Gutiérrez, M. A. *An exact sequence calculation for the second homotopy of a knot. II*, 327.
Hagopian, Charles L. *Schlais' theorem extends to λ connected plane continua*, 265.
Kearton, C. *Noninvertible knots of codimension 2*, 274.
Naoum, Adil G. *On the groups of inertia of smooth manifolds*, 629.
Rowlett, R. J. *The cobordism of involutions on orientable manifolds*, 309.

58. Global Analysis, Analysis on Manifolds
Norton, Victor and O'Brien, Thomas. *Anosov flows and expansiveness*, 625.
